

Zomato Restaurant Dataset

Exploratory Data Analysis

Why Analyze Zomato Data?

Market Trends

Understand consumer behavior.

Optimize Operations

Extract meaningful insights.

Project Objectives

01

Understand Data

Structure & characteristics.

02

Clean & Preprocess

Prepare data for analysis.

03

Analyze Trends

Ratings, cost, cuisines, delivery.

04

Visualize Patterns

Relationships between features.

05

Derive Insights

Business-oriented conclusions.

Dataset Overview

Key Attributes

- Restaurant Name
- City / Location
- Cuisines
- Average Cost for Two
- Aggregate Rating
- Online Delivery
- Table Booking

Thousands of records across cities.

Tools & Methodology

Programming

Python

Libraries

- Pandas
- NumPy
- Matplotlib
- Seaborn

Data Preparation

Data Loading

Pandas, initial inspection.

Cleaning & Preprocessing

Missing values, numeric conversion, consistency.

Exploratory Analysis

Restaurant Distribution

Density across cities.

Ratings Analysis

Common ranges, mid-to-high.

Cost for Two

Pricing ranges, outliers.

Online Delivery Impact

Higher ratings with delivery.

Cuisine Analysis

Popularity, average ratings.

Key Insights

Mid-Price Range

Majority of restaurants.

Online Delivery Boosts Ratings

Positive influence.

Cuisine Popularity

Certain cuisines better rated.

Uneven Distribution

Restaurants across cities.

Conclusion

EDA provides valuable insights into Zomato restaurant trends and customer preferences.

Helps owners and platforms make informed decisions on pricing, services, and market expansion.

Future Scope

Predict Ratings

Apply ML models.

Sentiment Analysis

Customer reviews.

Interactive Dashboards

Power BI, Tableau.

City-Specific Deep Dive

Targeted analysis.
